Unlock Tool Repair Guides

FRP • Dump File • USB Drivers • Test Point

Step-by-step guides for mobile technicians — what to check first, which driver to install, and how to approach dead-boot and FRP cases safely.

downloadunlocktool.com

For authorized device owners and technicians only. Always try official recovery first, and take a backup before any erase step.

Start in this order — it saves time

- 1. USB driver check — phone must be detected by Windows before any tool step.
- 2. Device mode check — download mode, EDL, or BROM/Preloader, as per the guide for that model.
- 3. FRP or dump-file step — only after the first two checks are clear.
- 4. Test point only when the guide asks for it — never guess a pinout.
- This deck links each topic to its full guide folder on downloadunlocktool.com.

Download Unlock Tool

- Full set of Unlock Tool guides in one folder: setup, FRP, password unlock, dump file, drivers, and test point work.
- Start here if you are new — read the setup guide before connecting a phone.
- Use the folder page to find the right guide for your repair case, not a random download link.

Unlock Tool FRP File

- FRP guides for authorized owners — what FRP lock is, and when bypass is the right step.
- Try official account recovery first. Bypass is for cases where the owner can prove ownership.
- FRP is not the same as screen lock — the guides explain the difference before any step.

Unlock Tool Free Dump File

- Dump file guides for dead-boot repair — what a dump file does, and when it is used.
- Dead-boot cases need care: wrong file or wrong mode can make things worse.
- Backup first where possible, and follow the model-specific guide, not a generic file.

Android Devices Test Point And ISP Pinout

- Test point and ISP pinout guides for Android devices — finding the right point before connecting.
- Never guess a pinout from a similar model. Board layout changes even within the same series.
- Check the device mode after shorting the point, then proceed only as the guide says.

Unlock Tool USB Drivers

- USB driver guides for Unlock Tool work — which driver is needed, and how to install it on Windows.
- Phone not detected? In most cases the problem is the driver, the cable, or the port — check those first.
- Install drivers before opening the tool, then confirm detection in Device Manager.

Before you start — quick checklist

- ☐ Backup taken, where possible, before any erase or flash step.
- ☐ Official recovery / account recovery tried first for FRP cases.
- ☐ Correct USB driver installed and phone detected in Windows.
- ☐ Correct mode confirmed — download, EDL, or BROM/Preloader.
- ☐ Model-specific guide open — no guessed pinout, no guessed file.
