- SSO / SCIM integration
- Dedicated Customer Success Manager
- SLA-backed support
- White-glove onboarding
- AI governance (custom limits & private deployment)

Platforms supported: ServiceNow • Salesforce • Lovable • Replit • AI Code Assistants

Quality Clouds

AI Code Governance

Why Quality Clouds?

Platform-agnostic governance

A single governance layer for ServiceNow, Salesforce, and AI-native development platforms including Lovable, Replit, Cursor, and Claude Code.

Shift-left AI code governance

Scan AI-generated code in pre-production environments — dev, test, UAT, and git repos — before it reaches production. Stop technical debt at the source.

LivecheckAI

Real-time AI code validation integrated directly into your development workflow via MCP. Get instant feedback as you code.

CI/CD quality gates

Integrate directly into GitHub, Azure DevOps, and GitLab pipelines. Block problematic code from reaching production automatically.

Enterprise-grade security

Hosted on Microsoft Azure with enterprise-grade reliability, security, and data residency options. SSO/SCIM integration available.

Trusted by global enterprises

Used by organisations including Barclays, Shell, Nestlé, BP, Sainsbury's, and Ameriprise Financial to govern their most critical platforms at scale.

Frequently Asked Questions

Which platforms are supported?

Quality Clouds supports ServiceNow, Salesforce, Adobe Magento, Lovable, Replit, and AI Code Assistants.

What are the AI feature limits?

AI-powered features like LivecheckAI are available on all plans. The free Developer plan includes a monthly usage cap. Teams and Enterprise plans unlock higher limits.

Can I upgrade from the Developer plan?

Yes. Upgrading to Teams gives your whole team access to full instance scanning, quality gates, role-based access, and expanded AI capabilities.

Where does Quality Clouds run?

Quality Clouds is hosted on Microsoft Azure, providing enterprise-grade reliability, security, and data residency options. Native in-platform integrations are available for ServiceNow and Salesforce.
