Usage Limits Across Plans

Feature	Free Plan	Pro Plan	Team Plan	Enterprise
Test executions per month	5,000	25,000	75,000	Custom
Team members	1	3	20	Unlimited
Projects	1	3	5	Unlimited
Data retention	14 days	30 days	90 days	Custom
Artifact storage	1 GB	5 GB	10 GB	Unlimited

Feature Categories Covered in the Full Comparison

The following feature areas are broken out plan-by-plan on the full comparison table at testdino.com/pricing. Each area lists which specific capabilities are included in Free, Pro, Team, and Enterprise:

- Core Playwright Support: custom Playwright reporter, screenshot capture, video recording storage, trace viewer integration, multi-browser results, sharding support

- Result Viewing & Configuration: real-time result streaming, run history & trends (7 days on Free, 365 days on Pro and Team, Custom on Enterprise), custom dashboards, environment tagging
- Debugging & Failure Analysis: stack trace viewer, error grouping, DOM snapshot viewer, console log capture, network request logs, visual diff comparison
- AI Test Analysis: AI failure classification, AI-generated fix suggestions, failure pattern recognition, custom AI classification rules
- Flaky Test Detection & Management: flaky test detection, stability score per test, flake subcategorization, quarantine recommendations
- Quality Metrics & Insights: pass/fail rate tracking, test duration trends, CI cost tracking, custom metrics & KPIs, scheduled PDF reports
- CI/CD Integration & Optimization: CI/CD provider support, failed-only rerun commands, quality gates on PRs, branch-level configuration
- Git & PR Integration: GitHub integration, GitLab integration, PR comment summaries, commit-linked results
- Manual Test Case Management: manual test cases & suites, manual runs, exploratory sessions, releases, import & export test cases, custom statuses & fields, manual test artifacts (10 GB / 50 GB / Custom by plan)
- Third Party Integrations: Slack App, Slack Webhook, Jira, Jira Forge App, Linear, Asana, monday, Azure DevOps, OpenClaw Bot, n8n, MCP Server for AI agents (local & remote), REST API
- Communication & Alerts: email alerts, Slack notifications, webhook support
- Enterprise Security & Compliance: SSO (OIDC), audit logs, role-based access control, SOC 2 compliance
- Support: community Discord, email support, priority support, dedicated account manager, custom onboarding

Pricing Calculator

Estimate your price by entering your test suite size and CI runs per month; these are multiplied into total test results per month to recommend a plan. One test result equals one test case run: a single test across 3 browsers counts as 3 results, and each retry counts again. Example: 100 tests times 100 CI runs per month equals 10,000 total test results per month, which falls under the Pro Plan (includes 25,000 test results/mo, \$49/month billed monthly, save 20% with annual billing).

Ways to reduce test volume and save costs: fail fast to stop a run on the first failure so broken builds do not burn test results; re-run only the failed tests, not the whole suite, after a flaky run; tag high-risk tests and run them first to catch regressions before a full pass.
