

## // SIMPLE CREDIT PRICING

# Keter Labs Pricing, Plans and Credits

Keter Labs pricing is based on plan access, shared credits and request limits for supported AI creative workflows. Users can compare Free, Pro and Studio options for image, video, music, design and mockup workflows, then review final checkout currency, billing amount and available plan details inside Keter Labs Billing before subscribing.

**One credit balance across every creative tool.**

The amounts below come from the same product limits and generation rates used by Keter. Variable workflows receive a server-calculated quote instead of an invented flat price.

## // PLAN ALLOWANCES

## See how many credits each plan adds.

New Free accounts registered through August 31, 2026 (UTC) receive 30 welcome credits once. Pro and Studio receive their allowance after each successful paid billing cycle.

Billing shows the checkout currency, final amount, Stripe mode, and whether a plan change is currently available. This public catalog only publishes enforced credit allowances.

// EXTRA CREDITS

## Check Billing for subscriber-only credit top-ups.

Top-ups are limited to active Pro and Studio subscriptions. Sign in to Billing to check availability; if the feature is enabled for your eligible account, Billing shows the exact packs and prices before checkout.

**Eligibility** Active Pro or Studio only

// CREDIT CATALOG

# What each tool costs.

Fixed rates are charged per delivered output. Output count multiplies the rate; Storyteller and Canvas calculate variable work on the server.

**2**

credits / delivered output

## Images, icons & illustrations

Text-to-image output, including the dedicated icon, illustration, photo, PNG, background, and art entry points.

credits / delivered output

## Image upscaling

The standalone upscaler charges 3 credits per output; the current Canvas image-upscale node charges 2.

|                           |   |
|---------------------------|---|
| Canvas image upscale      | 2 |
| Standalone image upscaler | 3 |

2–15

credits by output type

3D & 360° creation

The exact rate depends on the actual output: a 360° or 3D-scene image uses the image/image-edit rate; a generated 3D model uses the 3D rate.

|                        |     |
|------------------------|-----|
| 360° or 3D scene image | 2–3 |
| Generated 3D model     | 15  |

- 3D model: 15
- 3D scene image: 2–3
- 360° image: 2–3

// HOW CREDITS WORK

The balance stays predictable across Keter.

## One shared ledger

Plan grants and generation charges use the same account credit balance.

2

## Output count matters

Four fixed-price outputs use four times the displayed per-output rate.

3

## Variable work is quoted

Storyteller stages and Canvas workflows use the exact server quote shown for that run.

---

# Start with the tool you actually came for.

Your plan and credit balance follow you across Studio, Storyteller, Canvas, and every generator.
