Which LogSgen AI plan is right for you?

LogSgen AI plans are built around how often you publish. Every plan gives you access to the creator tools, including the script generator, hook generator and idea engine. The differences are how many generations you get each month, how many languages you can create in, and the level of support.

Starter: for new creators

Starter includes 50 generations a month in one language, standard support and basic templates. It suits creators who are building a posting habit and write in a single language.

Pro: for creators who post every day

Pro includes 250 generations a month, all supported languages (English, Urdu, Arabic and Spanish), priority support, advanced templates and token tracking. It suits creators who publish daily or speak to audiences in more than one language.

Scale: for agencies and teams

Scale includes unlimited generations, all languages, 24/7 priority support, custom templates and team collaboration. It suits agencies that write scripts for several client accounts and need repeatable output.

Want to try it first?

You can start with the free plan to test the tools before you pay. Questions about plans, tokens or billing are answered on our FAQ page, and you can reach the team any time from the contact page.
